

(a) CPU view of one WebGL inference

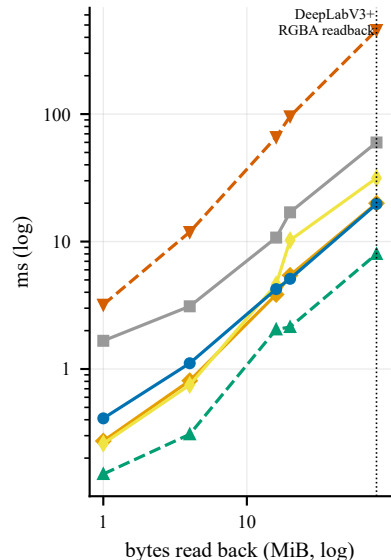

- GPU busy (timer queries)
- inside readPixels
- inside other WebGL calls
- JS between WebGL calls

(b) V8 profile of the same page

- readPixels (native)
- ORT decode (RGBA unpack)
- garbage collection
- other ORT JS
- other WebGL calls
- harness + (program)

(c) readback and unpack cost, no ORT

- WebGL readPixels RGBA (ORT's path)
- WebGL readPixels RED
- WebGL PBO + fence, RGBA
- WebGPU mapAsync
- ORT decode: filter($i \% 4 == 0$)
- strided loop (same output)
